Introduction

Backend Java Developer with expertise in Java, GCP, Docker, Kubernetes, and Cassandra, focused on designing and optimizing high-performance, scalable systems. Experienced in building robust cloud-native applications and delivering new product features to enhance user experience. Skilled in streamlining CI/CD processes, automating workflows, and driving productivity improvements for enterprise platforms. Holds a B.Tech in Electronics and Communications Engineering with high academic distinction (CGPA 9.77) and certifications in Big Data and AWS.

Experience(0.5 years FTE, 1 year Internship)

Software Engineer

Pune, MH

Avaya

July 2024 – Dec 2024

- Worked in an agile environment on the development of Avaya's famed AXP product - an industry standard in UCaaS and CCaaS as a backend developer. Worked primarily with Java, Maven and Cassandra in developing monolithic entities as well as microservices in Spring.
- Developed frontend widgets for the product on React.
- Worked extensively on product deployment with Docker, Kubernetes and Google Cloud Platform
- Contributed massively in developing and optimizing CI/CD pipelines on Jenkins and Bamboo for end-to-end product development.
- Solely responsible for vulnerability patching for issues discovered in Qualys, Black Duck and Wiz scans.
- Worked extensively on testing developed features with standard QA procedures as a part of the company's "Shift-Left" initiative.
- Good hands-on experience in developing and testing in a Linux environment.

Software Engineer Intern

Pune, MH

Avaya

Jan 2024 – July 2024

- Same as above experience as I have continuously worked on the same project since Jan 2024.

Software Engineer Intern

Pune, MH

IDEaS - A SAS Company

July 2023 – Dec 2023

- Worked on developing IDEaS's G3 product, a high performance revenue management system for the hospitality industry - a successor to its much acclaimed G2 product, as a backend developer. Worked primarily on Java and SQL on the backend and also contributed on the frontend with React.
- Along with feature development and bug fixes, I contributed greatly to data optimization and performance tuning to ensure precision on post-COVID data.
- Worked on automating workflows with Python and Shell scripting.
- Developed tools for System Health Reports across various property management systems, ensuring data quality for revenue management and forecasting.
- Assisted in property migration between management systems, monitoring revenue performance pre and post migration. Significantly reduced time consumption and errors during the migration process

Education

MIT World Peace University

July 2020 – July 2024

B. Tech in Electronics and Communications Engineering

- CGPA: 9.77/10.0
- Earned a Bronze Medal for graduating with the third-highest CGPA in the department.
- Certified in Big Data Computing by NPTEL
- Certified in AWS Fundamentals by AWS Academy

Projects

Product Authenticator

- Digital product authenticator with features like user registration/authentication, product key verification, and usage restrictions. Aims to be a comprehensive licensing solution for multiple software products.
- Tools Used: Java, React, MongoDB, JavaFX/Swing

Password Manager

- Web app for password generation and management across various networks. Ensures secure access through advanced encryption and authentication methods, enhancing online security and convenience.
- Tools Used: Python (Django), SQL, React

Blockchain Generator

- Implemented simple blockchain logic with generation and verification.
- Tools Used: Rust

Technologies

Languages: Java, Python, C/C++, Rust, React, SQL, Cassandra, MongoDB.

Technologies: Docker, Kubernetes, GCP, RHEL, Maven, Spring, JUnit, Mockito, Django, Jenkins, Bamboo, Jira, Confluence, Machine Learning.
